# elcome to Okinawa and to the International Conference on Ultrafast Phenomena!

This year's event – the XIX biannual international conference – continues the tradition of bringing together a multidisciplinary group of researchers sharing a common interest in science and technology at the highest temporal resolution. Scientists and engineers from all over the world will join us to take part in this event.

The conference will include 315 oral and poster contributions. We have scheduled 11 invited, 124 oral and 180 poster presentations over what should be five very full days. The presentations are in our opinion exceptional in their scientific quality and range of topics.

A sponsor exhibit featuring leading companies will be held in conjunction with the meeting.

We hope that you will enjoy the unique beauty of Okinawa, the program, and the opportunity to spend time with colleagues from around the globe.

Sincerely,

#### General Chairs

Kaoru Yamanouchi, University of Tokyo, Japan Steven Cundiff, JILA, NIST and University of Colorado, USA Regina de Vivie-Riedle, Ludwig-Maximilians-University, Germany

#### Program Committee Chairs

Makoto Kuwata-Gonokami, University of Tokyo, Japan Louis DiMauro, Ohio State University, USA

# **Conference topics**

#### Pulse generation and measurement

New sources, new wavelength regimes, frequency conversion techniques, amplifiers, attosecond pulse generation, pulse shaping, pulse diagnostics, measurement techniques and frequency standards.

#### Physics

Ultrafast nonlinear optical processes, kinetics of non-equilibrium processes, quantum confinement, coherent transients, nonlinear pulse propagation, novel ultrafast spectroscopic techniques, high intensity physics, attosecond dynamics.

#### Materials science

Highly correlated systems, coherent phonons in solids, carrier dynamics in nanoparticles, carbon-based materials, structural dynamics with X-rays and electrons.

#### Chemistry

Vibrational and conformational dynamics, energy transfer, femtochemistry, proton and electron transfer, solvation dynamics, wave packet dynamics and coherent control of reactions, structural dynamics with X-rays and electrons.

#### Biology

Photosynthesis, vision, heme proteins, photoactive proteins, photoisomerization in chromoproteins, wavepacket dynamics, femtobiology, structural dynamics with X-rays and electrons, medical applications.

#### Electronics & optoelectronics

Photoconductivity, generation, propagation and detection of ultrafast electrical signals, plasmonics, terahertz radiation, electrooptical sampling and detectors.

#### Applications

Real world applications of ultrafast technology, including ultrafast near-field, nonlinear and confocal microscopes, real-time/ real-space electron microscopy, medical applications, high speed communication, micromachining and more.

## **Speaker instructions**

Duration of oral presentations are:

- 15 minutes (including 3 minutes for discussion) for contributed talks
- 30 minutes (including 5 minutes for discussion) for invited talks

Speakers are requested to bring their own computers. Our projectors will be equipped with standard D-SUB 15-pin cables. If your computer is Macintosh, you must bring your own adapter.

Make sure to test your computer and its connection to the projector during the coffee break preceding the talk or the afternoon of the day before for those scheduled in the morning. This is mandatory as the schedule is tight and time has to be respected in order for listeners to move from one lecture hall to the other during parallel sessions.

Speakers are asked to check-in with the session presider in the conference room ten minutes before the session begins. The lecture halls are equipped with microphones and projectors.

# Postdeadline contributions

As a tradition, the 19th International Conference on Ultrafast Phenomena will showcase postdeadline presentations. The purpose of these contributions is to give conference participants the opportunity to hear new and significant results in rapidly advancing areas. Only those papers judged to be truly excellent and compelling in their timeliness will be accepted for presentation as an oral contribution. The post deadline papers are scheduled for oral presentation on Thursday July 10 between 16:15 - 18:00 in Room A. Authors will be notified whether their papers have been accepted on Monday July 7 directly at the registration desk. Postdeadline papers may be included in the proceedings if the authors can submit the manuscript in a timely manner.

# **Poster instructions**

180 posters will be presented during three sessions that will take place on Monday July 7, Tuesday July 8, and Thursday July 9 (all sessions scheduled from 15:45 to 17:15). There will be no oral presentations during this time.

Poster sessions are scheduled to provide an opportunity for selected papers to be presented in greater visual details and to facilitate discussions among attendees. To display his/her poster, each author is provided with a 90 cm wide  $\times$  210 cm high space (maximum dimensions). A poster may only be put up on the day of the assigned poster session. Each presenter must take care to remove his/her poster by no later than 19:00 on the same day. Poster presenters are asked to be at their posters during their poster session. Note: Fixing material will be provided. The boards will be marked with poster presentation codes.

# Proceedings

As at previous conferences, a book of Proceedings of the Ultrafast Phenomena XIX will be published. Authors of all accepted contributions (invited, oral, and poster) are invited to submit a paper for the book of Proceedings. We anticipate this volume to contain around 300 articles of 3 pages each. The Proceedings will be published by Springer Verlag. Each conference participant will receive a hard copy of the book, as well as a one-year online access to its electronic version.

All papers must follow the format and style set by Springer. Author instructions are given on the conference website at:

#### http://up2014.org/proceedings.html

The most salient information is the following:

- The paper is limited to no more than 3 pages, including all text, figures, and references.
- Papers are to be submitted in LaTeX (with PDF) or MS Word format by email to up2014@chem.s.u-tokyo.ac.jp. Papers must be submitted no later than 17:00 on July 19, 2014, JST (8:00 on July 19, GMT). A signed Consent to Publish form and high-resolution image files for all figures must accompany each submission.
- No late papers, incorrectly formatted papers, or papers longer than 3 pages will be accepted.

# **Conference digest**

An online technical digest including the two-page summaries will be available to the participants.

# **Registration information**

On-site registration fees are as follows:

	Member *	Non-member
Regular participant	50,000 JPY	60,000 JPY
Student	30,000 JPY	40,000 JPY
Accompanying person		15,000 JPY

\* Members of the Japan Intense Light Field Science Society (JILS), the Optical Society (OSA), the European Physical Society (EPS), the Chemical Society of Japan (CSJ), the Physical Society of Japan (JPS), the Japan Society of Applied Physics (JSAP), the Laser Society of Japan (LSJ), and the Spectroscopical Society of Japan (SPSJ) are eligible to attend UP2014 at a member participant rate.

All registered regular and student participants are eligible to:

- Admission to the technical sessions of the conference.
- Online digest including the two page summaries.
- Hard copy of the proceedings.
- One-year access to the electronic edition of the proceedings.
- Sponsor exhibition running from Monday morning to Friday noon time.
- Coffee breaks (Monday July 7 through Friday July 11) as mentioned in the program.
- Lunches (Monday July 7 through Friday July 11).
- Welcome reception on Sunday July 6 at 18:00 (the registration desk will be open on this day from 15:00 to 18:00).
- Beach side barbecue party sponsored by Spectra-Physics on Tuesday evening, July 8, at 19:00.
- Conference banquet dinner on Thursday evening, July 10, at 19:00.

An attendee registered as an accompanying person is eligible to the five lunches, coffee service, and the three social events (welcome reception, beach side barbeque party sponsored by Spectra-Physics, and conference banquet). They cannot receive the online digest of the conference, or the hard copy or online version of the proceedings volume.

Registration hours are as follows:

Sunday July 6, 2014 15:00 - 18:00
Monday July 7, 2014 8:00 - 12:30 and 13:45 - 17:00
Tuesday July 8, 2014 8:00 - 12:30 and 13:45 - 17:00
Wednesday July 9, 2014 8:00 - 12:30 and 13:45 - 17:00
Thursday July 10, 2014 8:00 - 12:30 and 13:45 - 17:00
Friday July 11, 2014 8:30 - 11:00

#### Tuesday July 8, 19:00-21:00

# **Beach side barbecue party sponsored by Spectra-Physics** at Ginowan Tropical Beach

(To be postponed to Wednesday July 9, 19:00-21:00, in case of rain)

Thursday July 10, 19:00-22:00

#### **Conference banquet dinner**

in Banquet Hall Hagoromo, Laguna Garden Hotel URL: http://www.laguna-garden.jp/ Phone: 098 (897) 2121

## Lunches

All UP2014 attendees are eligible to five lunches (from Monday July 7 to Friday July 11). Lunch will be served in the Exhibition Hall, Okinawa Convention Center.

## Attention

All indoor areas of the Okinawa Convention Center are strictly nonsmoking. No food or drink is allowed inside Room A (the Theater).

# **On-site facilities**

Free wireless Internet access is available at the Okinawa Convention Center, to be used at your own risk and discretion.

A message board will be installed near the registration area.

# Sponsor exhibition

Sponsor exhibition booths are situated around the poster session area. See the list of sponsors on pages XXIV-XXV. The exhibits will be shown throughout the conference.

The exhibition space is located close to the lecture halls and next to the poster area, in order to allow the participants easy access to the booths. Coffee breaks are arranged to give the participants the opportunity to visit the booths.

# **Exhibitor information**

Exhibitors are able to set up their booths in the morning on Monday July 7 from 9:00.

All exhibition equipment and material must be removed by Friday 14:00 at the latest.

# 07.Mon.A Attosecond and High Harmonic Generation

**Presider:** Kaoru Yamanouchi (University of Tokyo, Japan)

#### 07.Mon.A.1 08:45 ------ Invited

#### Probing Ultrafast Molecular Dynamics with Intense Attosecond Pulses

Katsumi Midorikawa<sup>1</sup>; <sup>1</sup>RIKEN Center for Advanced Photonics, Japan.

ABSTRACT Recent results on a new attosecond spectroscopic method called as nonlinear Fourier transform spectroscopy using attosecond pulse train and generation of multi-gigawatt isolated attosecond pulses by the infrared two-color laser field synthesis are reported.

Mancuso<sup>1</sup>, Carlos Hernandez-Garcia<sup>1,3</sup>, Franklin Dollar<sup>1</sup>, Benjamin Galloway<sup>1</sup>, Dimitar Popmintchev<sup>1</sup>, Benjamin Langdon<sup>4</sup>, Amelie Auger<sup>4</sup>, Pei-Chi Huang<sup>2</sup>, Barry Walker<sup>5</sup>, Luis Plaja<sup>3</sup>, Agnieszka Jaron-Becker<sup>1</sup>, Andreas Becker<sup>1</sup>, Margaret Murnane<sup>1</sup>, Henry Kapteyn<sup>1</sup>, Tenio Popmintchev<sup>1</sup>; <sup>1</sup>Physics, JILA/University of Colorado at Boulder, USA; <sup>2</sup>Institute of Photonics Technologies, National Tsing Hua University, Taiwan; <sup>3</sup>Grupo de Investigación en Óptica Extrema, Universidad de Salamanca, Spain; <sup>4</sup>Kapteyn-Murnane Labs Inc., USA; <sup>5</sup>University of Delaware, USA.

ABSTRACT By driving the high harmonic generation process with multi-cycle mid-infrared laser pulses, we demonstrate bright isolated, attosecond soft X-ray pulses for the first time.

# 07.Mon.A.3 09:30 ----- Contributed

#### Sub-100 fs mid-infrared pulses as driver for a table-top hard x-ray source

Jannick Weisshaupt<sup>1</sup>, Vincent Juvé<sup>1</sup>, Shi-an Ku<sup>1</sup>, Marcel Holtz<sup>1</sup>, Michael Woerner<sup>1</sup>, Thomas Elsaesser<sup>1</sup>, Skirmantas Alisauskas<sup>2</sup>, Audrius Pugzlys<sup>2</sup>, Andrius Baltuška<sup>2</sup>; <sup>1</sup>Max-Born-Institut Berlin, Germany; <sup>2</sup>Photonics Institute, Austria.

ABSTRACT Midinfrared powerful 90 fs pulses at a wavelength of  $\lambda$ =3.9µm drive a femtosecond hard x-ray source (Cu~Ka:  $\hbar\omega$  =8.05 keV). Up to 10<sup>8</sup> X-ray photons/pulse are generated which is twice as many as with 800 nm drivers of a 100 times higher peak intensity.

Marangos<sup>2</sup>, Andrius Baltuska<sup>1</sup>; <sup>1</sup>Photonics Institute, *TU Vienna, Austria*; <sup>2</sup>Blackett Laboratory, Imperial College, United Kingdom; <sup>3</sup>Max Born Institute, Germany.

ABSTRACT We combine phase-locked femtosecond pulses with 1.5µm, 1.0µm and 0.5µm wavelength to shape optical cycles and experimentally realize the concept of the "perfect wave for high harmonic generation". This has far-reaching implications for attosecond spectroscopy.

#### Optimized waveforms for enhancing high-harmonic yield by synthesizing multi-color laser fields

Chii Dong Lin<sup>1</sup>, Cheng Jin<sup>1</sup>, Gouli Wang<sup>2</sup>, Fei Wei<sup>1</sup>, Anh Thu Le<sup>1</sup>; <sup>1</sup>Physics, Kansas State University, USA; <sup>2</sup>Physics, Northwest Normal University, China.

ABSTRACT High harmonics favoring phase-matching conditions can be enhanced by one to two orders of magnitude if the laser's waveform is optimized by synthesizing two or three-color fields without an increase in the total energy.

### Detection of the G(-H)<sup>•</sup> Radical in the Electronic Deactivation of the G-C Watson-Crick Base Pair

Katharina Röttger<sup>1</sup>, Friedrich Temps<sup>1</sup>; <sup>1</sup>Institute of Physical Chemistry, Germany.

07.Mon.P1.22

ABSTRACT Transient absorption spectroscopy of the G-C base pair revealed the formation of the G(-H)<sup>•</sup> radical with lifetime 3 ps in the electronic deactivation. This radical is the key intermediate in an electron-coupled proton transfer.

### <sup>07.Mon.P1.21</sup> Two-Step Explosion Dynamics of Highly Charged Fullerene Cations $C_{60}^{q+}$ (q = 20-60)

Kaoru Yamazaki<sup>1</sup>, Takashi Nakamura<sup>1</sup>, Naoyuki Niitsu<sup>1,2</sup>, Manabu Kanno<sup>1</sup>, Kiyoshi Ueda<sup>3</sup>, Hirohiko Kono<sup>1</sup>; <sup>1</sup>Department of Chemistry, Graduate School of Science, Tohoku University, Japan; <sup>2</sup>Nanosystem Research Institute (NRI), National Institute of Advanced Industrial Science and Technology (AIST), Japan; <sup>3</sup>Institute of Multidisciplinary Research for Advanced Materials, Tohoku University, Japan.

**ABSTRACT**  $C_{60}^{q_1}$  (q = 20-60) firstly ejects fast atomic cations  $C^{z_1}$  (z  $\ge 1$ ) via Coulomb explosions on a 10 fs timescale. Thermal evaporations of slow atomic and molecular fragments subsequently occur in 100-1000 fs.

# Ultrafast Electron Solvation in Room Temperature Ionic Liquid/Metal Interfaces

Alex Shearer<sup>1</sup>, Benjamin Caplins<sup>1</sup>, David Suich<sup>1</sup>, Charles Harris<sup>1</sup>; <sup>1</sup>University of California Berkeley, USA.

**ABSTRACT** The room temperature ionic liquid  $[Bmpyr]^*[NTf_2]^-$  is studied on Ag(111). Monolayer and bilayer films both show a single state solvating, the timescale of solvation and magnitude of energy relaxation is significantly greater for the bilayer.

#### Ultrafast Vibrational Spectroscopy at Liquid Interfaces by Heterodyne-Detected Sum-Frequency Generation

Tahei Tahara<sup>1,2</sup>; <sup>1</sup>Molecular Spectroscopy Laboratory, RIKEN, Japan; <sup>2</sup>RIKEN Center for Advanced Photonics, RIKEN, Japan.

ABSTRACT Ultrafast dynamics at liquid interfaces are still obscure. Femtosecond time-resolved heterodyne-detected vibrational sum-frequency generation spectroscopy now enables us to investigate vibrational/photochemical dynamics at liquid interfaces with the same clarity as in solution-phase ultrafast spectroscopy.
